

CONTINENTAL DRIFT DISPLAY AT LIONS CENTRE, EDMONTON MARCH 25-26, 2017

Jim Taylor, P. Geol. is showing his award winning 96-page philatelic exhibit titled *Continental Drift & Plate Tectonics* at the Edmonton Stamp Club Spring National Exhibition March 25-26, 2017. The fascinating story of the evolution and application of Alfred Wegener's Continental Drift Theory and the rise of the Science of Plate Tectonics is illustrated and explained for both a general and a scientific audience. The tale of the integration of the physical and biological sciences into a theory that explains natural earth processes and 4.5 billion year earth history is of great interest to students, teachers, scientists and the general public.

The *Continental Drift* exhibit is the work of many years of assembling and researching the common and scarce issues of many countries to produce the absorbing story that goes from the "Flat Earth Theory" to "Interplanetary Plate Tectonics". Photography is permitted.

The Edmonton Stamp Club Exhibition is scheduled for March 25-26, 2017 at the Edmonton Central Lions Recreation Centre, 113 Street and 111 Avenue, Saturday 10 am to 5 pm, Sunday 10 am to 4 pm. Free Admission, Free Parking.
